Your First Line of Defense
Against the Corona Virus

WHERE DOES A COUGH GO?

Coughs, along with sneezes, play a key role in transferring various respiratory diseases. [5]

HANDY ANTIBAC PROTECTION MASKS

MASKS PREVENT THE SPREAD OF VIRUSES

One study looked at how masks could help people with the seasonal flu **limit spreading it when they exhale small droplets containing the virus**. Overall, researchers found masks led to a more than **threefold reduction** in how much virus people sprayed into the air. [11]

TYPES OF MASKS

3-PLY SURGICAL FACE MASK

Prevents large droplets of bodily fluids that may contain viruses or other germs from escaping via the nose and mouth. They also protect against splashes and sprays from other people, such as those from sneezes and coughs.

N95 PARTICULATE RESPIRATOR MASK

Designed to protect the wearer from small particles in the air, like viruses. It filters down to 0.3 microns in particle size.

They're certified by the USA National Institute for Occupational Safety and Health (NIOSH). The N95 can filter 95% of airborne particles, according to the CDC.
